

ZAKARYA OUKIL

Security Systems / eBPF Engineering

Algiers / Remote (Open to Relocation) | Available for hire

Translate security policy into observable Linux runtime controls.

CORE COMPETENCIES

- Linux kernel & eBPF LSM research
- Zero-trust runtime architecture
- C / C++ & Python systems tooling
- Adversarial ML & sandbox benchmarking

SELECTED PORTFOLIO EVIDENCE

Kernel security research

Research focus on eBPF LSM sandboxing and observable security controls for Linux workloads in zero-trust runtimes.

Adversarial ML & systems evaluation

Portfolio research examines evasion against intrusion detection and compares sandbox approaches. Replay timing is illustrative, not a production benchmark.

EDUCATION & CREDENTIALS

Master's degree candidate - Cybersecurity & Systems Architecture

eJPT - Certified / INE Security

BTL1 - In progress / Security Blue Team

CompTIA Security+ - In progress

TOOLS & ENGINEERING

C / C++ / Python / Linux / eBPF / Docker / Kubernetes / Git

CONTACT & AVAILABILITY

Remote / Hybrid / Open to relocation

Immediate / 2 weeks - confirm during screening

Contact through the portfolio Recruiter Fast-Pass inquiry form.
